I&J Fisnar Inc. Fluid Reservoirs

ASME certified fluid reservoir tanks from I&J Fisnar Inc. include top and bottom ported models ranging from 2qts to 5gallons. Top ported reservoirs are suitable for liquids less than 150,000cps and bottom ported reservoirs can be used for fluids less than 300,000cps.

Reservoirs are manufactured either from high grade stainless steel or aluminum and are available in two styles, bottle-type with a narrow opening to pour liquid directly into the reservoir or open-top for insertion of liners and containers. Liners should be used with anaerobic fluid and other materials that should not come into contact with metal.

Each reservoir is supplied with a 10ft (3.05meter) fluid hose and a ¼” (6.35mm) air line.

Models are offered with agitators that can degas material with the addition of a vacuum pump.

Reservoirs are also offered with CE certification.

For further information on all of our dispensing solutions contact I&J Fisnar Inc.
